6-speed Gearbox 02G

02G gearbox is used in VW T4 cars in the Syncro version or in the front drive with an engine output of 111 kW. The reverse gear is in back right position, opposite the 5th gear.

With our kit, the sixth gear is shifted in place of the original reverse gear, the reverse is even more to the right and back. Reverse is possible only after pressing the shift lever down.

There are two graduations for the sixth gear, 0.55 for the front drive (diff. ratio 3.9), 0.47 for the syncro version (diff. ratio 4.9).

As part of the modification, we offer free inspection of all the internal parts of the gearbox and, in case of need, we propose replacement. The customer pays only the material according to the pricelist of the original parts of VW.

On the modified gearbox, we provide the same warranty as the car manufacturer, there is no need for any change in the technical or operational documentation of the vehicle.

To have us install the gearbox it is necessary to deliver the gearbox to our workshop at: EuroTuning, s.r.o.; Malesicke nam. 1; 10800 Praha 10 or bring the whole car and we will install the modification, including removing the gearbox from the car. Due to the large range of necessary changes within the gearbox, it is necessary to account for the time required for installation, 3-4 weeks.

The price of modification to 6-speed gearbox: 2.500 EUR
Including removing the gearbox from the car: 2.950 EUR
(Prices without VAT)
