6-speed Gearbox kit 02A/02J/02B/02D

Using a special kit of parts we are able to add the 6th gear to the classical, series VW 5-gear-gearbox of the type 02A or 02J. (VW T4: 02B, 02D) The fitting of the 6th gear is possible thanks to the original design of extension shafts, toothed wheels of the 5th and 6th gear and a new gearbox cover.

The modified 6-gear-gearbox with a new cover is only by 45 mm longer than the series 5-gear-gearbox. The system and way of gear shifting remain the original ones.

The fitting does not require any modifications of the gearbox housing, the added toothed wheels are synchronized, the new toothing is ground and its operation absolutely noiseless.

Charts for gearboxes:

https://www.eurotuning.cz/diagrams_conversion_kit.html

(these are only examples of frequently modified gearboxes, if you do not find a diagram for your gearbox, we will send it to you upon request)

On the modified gearbox, we provide the same warranty as the car manufacturer, there is no need for any change in the technical or operational documentation of the vehicle.

The assembly procedure is here

https://www.eurotuning.cz/pdf/ET_6gear_installation_instructions.pdf

The kit does not alter the original five gears at all, and simply adds a new longer sixth gear that lowers the engine's revs by 400-550rpm at 130km/h (depending on the gearbox), lowering fuel consumption and CO2 emissions in the process.
